BGE On Call Services and Substation Civil Engineering (Various Jurisdictions)

DDC inc. serves as an on-call civil engineer, surveyor, and landscape architect for property analysis and for the development of substation sites in the Baltimore Metropolitan Area for BGE. DDC works in cooperation with BGE real estate and BGE engineering staff to identify potential properties that may be of use in expanding BGE's service area. DDC then assists BGE in establishing site constraints, in laying out the substation components, and in the approval of zoning and land development plans for transmission and boosting facilities. Development requirements for both the municipality in which the station is located, as well as the security and safety requirements set forth by BGE, state, and federal utility regulators are strictly adhered to with each BGE project.
